

# ROTARY DAMPER PRODUCTION LINE

## AR29T – 600<sup>TH</sup> UNIT DELIVERED

### About AR29T

AR29T is the new generation of Rotary Damper especially designed for heavy vehicles operating in very tough environment. This is the direct evolution of the

AR01/AR02 damper with an extended range of use with temperature, load and life time.

Originally specially designed to fit into restrictive tracked vehicle running gear space claim, AR rotary shock absorber family has been opening its application range to wheeled vehicles and heavy machinery.

### Production line

With still more than 3.000 units in the order book to be delivered until 2023, a new production line has been implemented in Piedrafita. New areas have been converted and dedicated to host AR29T production special equipment: Extended assembly room, new metrology room to host CMM, 175 kW test bench, ad-hoc advanced tooling...

### Quality and punctuality

Beside the high delivery rate and a very aggressive initial production ramp-up:

- 100% unit conformity
- 0 % Delay on delivery

### Growing capacity

- Fast test units supply
- Light customization available
